

PRAJAKTA SHEVAKARI

+1 (443) 401-8792 | prajaktashevakari@gmail.com | Baltimore, USA | Open to relocation | <https://www.linkedin.com/in/prajakta-shevakari/>

PROFESSIONAL SUMMARY

- Software engineer with over six years of experience designing and implementing scalable fintech systems and distributed backend services on cloud platforms.
- Implemented and deployed ML models in academia, designing secure, resilient pipelines that ensure reliable results.

SKILLS

- **Backend & Architecture:** Java, Python, Spring Boot, Hibernate, Microservices, REST, Apache Kafka, system design, distributed systems
- **Cloud & Infrastructure:** AWS (EC2, S3, Lambda), cloud-native services, scalability, reliability
- **Development & DevOps:** Git, Jenkins, TeamCity, Maven, Chef, CI/CD pipelines, JUnit, Bash
- **Data Engineering:** Apache Spark, SQL, ETL pipelines, data processing, Splunk, Power BI
- **AI/ Machine Learning:** PyTorch, LLMs, Transformers, NLP, ML model integration, inference pipelines

PROFESSIONAL EXPERIENCE

Johns Hopkins University - Office of Digital Transformation

Baltimore, MD

Software Engineer Intern

June 2025 - August 2025

- Engineered Python pipelines serving 200+ faculty members across JHU departments, reducing manual data entry workload by 25%.
- Designed and deployed internal applications to automate HR data cleanup, streamlining workflows and ensuring 100% data integrity.

Barclays

Pune, India

Lead Software Engineer

April 2023 - May 2024

- Architected a high-volume executive dashboard using AngularJS and REST APIs to visualize 1M+ daily transactions, providing real-time actionable insights for back-office decision-making.
- Spearheaded a DevOps transformation initiative by automating Disaster Recovery (DR) deployments via Autosys, TeamCity, and Chef; slashed release cycle time from 4+ hours to under 10 minutes (96% reduction).

JPMorgan Chase

Mumbai, India

Software Engineer III

October 2021 - April 2023

- Led the cloud migration of terabyte-scale regulated financial data from on-premise mainframes to AWS (S3, EC2), designing controls to balance latency, consistency, and regulatory constraints while ensuring zero data loss.
- Redesigned legacy monolithic modules into resilient microservices, introducing structured logging and proactive alerting; reduced Mean Time To Repair (MTTR) by 70% (from 6 days to <2 days).
- Built a high-throughput data enrichment engine using Java and Apache Spark, ingesting GBs of daily transaction data from AWS to generate regulatory compliance reports.
- Executed 7 Proof-of-Concepts (POCs) in 30 days to define service boundaries and data contracts, establishing the target architecture for the firm's hybrid-cloud trade processing system.

FIS Global

Pune, India

Software Engineer

July 2017 - October 2021

- Managed SDLC for 90+ weekly production deployments, achieving a 95% on-time delivery rate by prioritizing showstopper defects.
- Engineered a static bulk-upload utility that eliminated 10+ hours/week of manual operational effort and reduced reference-data entry errors by ~90%, earning the Above and Beyond award.

EDUCATION

Johns Hopkins University

Expected May 2026

Master's, Computer Science

Current GPA: 3.7

- Artificial Intelligence, Machine Learning, Natural Language Processing, ML: AI System Design & Development, Human Language Technology, Software System Design, Parallel Computing for Data Science

Savitribai Phule Pune University

August 2013 - May 2017

Bachelor's, Computer Science

GPA: 3.8

- Data Structures and Problem Solving, Cloud Computing, Business Analytics and Intelligence, High-Performance Computing, Computer Networks, Advanced Computer Programming, Design and Analysis of Algorithms

PROJECTS

- **D-FuseSmileNet – Deep Learning for Spontaneous Smile Recognition:** Built a transformer-based classifier combining D-Marker features with learned embeddings using Hadamard fusion; evaluated performance across four public datasets and consistently outperformed prior deep-learning baselines. Designed for affective computing applications such as customer service and social robotics, where distinguishing genuine from posed smiles improves user interactions.
- **Clinical NER with LLMs and Chain-of-Thought Prompting:** Built a few-shot, CoT-guided annotation pipeline for low-resource Bengali clinical text; improved token-level F1 and trained a downstream NER model on synthetic labels, significantly reducing manual annotation effort. Helps unlock medical information in under-resourced languages and accelerates NLP research for healthcare.
- **TerraNova – AI-Powered Post-Wildfire Decision Support System:** Built an end-to-end platform integrating satellite imagery, geospatial data and ML models, with backend pipelines for burn-severity segmentation, reburn-risk prediction and multi-objective optimization, all served through an interactive web interface for scenario-based analysis. Reduces assessment time after wildfires and guides land managers in making data-driven recovery decisions.

EXTRACURRICULAR ACTIVITIES

• Diploma in Bharatanatyam

• Hiking

• Iyengar Yoga & Meditation
